

1. What is data science?

Data science is a field of extracting useful knowledge from data using scientific methods.

2. Importance of data science.

- Better decision making
- Predicts future trends

3. Benefits of data science.

- Improves customer satisfaction
- Increases efficiency

4. Application of Data Science

- Healthcare
- Banking
- E-commerce
- Social media

5. Different facets of data

Structured : rows & columns

Semi-structured : XML, JSON

unstructured : No fixed format

6. Structured vs semi-structured vs unstructured

Structured : Database, Excel sheet

Semi-structured : XML, JSON

Unstructured : Images, audio, video, etc.

7. What is Big Data? 5 Vs :

- Volume
- Velocity
- variety
- Veracity
- Value

8. Big Data Ecosystem :

It is a collection of tools used to store and process Big Data

- Hadoop

- Spark

- Hive

- HBase

9. Phases of Data Science Process

- Data Collection

- ~~Data~~ cleaning

- Data Analysis

- Modelling

10. What is Data Retrieval

Data Retrieval is process of obtaining data from storage

eg: Database, API

11. Importance of data collection

It provides accurate, relevant and reliable data for analysis

12. what is Data cleansing?

- Remove ~~duplicates~~
- Handle ~~missing values~~
- correct ~~error~~

13 what is Data Integration?

Data integration combines data from multiple sources into one system

14. ^{what is} Data Transformation?

Data transformation converts data into a suitable format

15 what is Data Analysis?

Data analysis is examining the data to find useful insights

- ★ Statistical analysis
- ★ Data visualization
- ★ Regression
- ★ Classification
